FURTH FORTUNE

COMPANY OVERVIEW

Alba today. MerTek in 2027.

Furth Fortune offers Alba commercially today. MerTek is its future technology platform, with a release planned for 2027.

TWO PRODUCTS

Now · available commercially

Alba

Alba is Furth Fortune's set of rapid application build tools. Coding agents use it to produce traditional client/server applications: C# services, generated client and database code, accounts, and deployment. It is Furth Fortune's commercial product today.

- Shared JSON definitions describe tables, service calls, events and text once; Wayland generates the C#, JavaScript, TypeScript and SQL, so the database, server and browser start from the same definitions.
- Hand-written C# rules live in their own layer, which regeneration never overwrites.
- Typically ships as separate containers for the web service, data service, PostgreSQL and Redis, each with the project's own settings and secrets.

Future technology · 2027 release

MerTek

MerTek is Furth Fortune's future technology platform, with a release planned for 2027. It is home to the Trident application language and runtime, the Cutlass systems language, and shared systems for data, graphics and devices. Trident defines application behavior; the runtime and shared services check types, control resource use and apply security rules.

- Trident combines explicit types with units, bounded loops, complete branches, structured faults and endpoints declared in the language, so the compiler checks routes and parameters.
- Grants limit what code may call; identity, record access, classification and output checks decide who sees which data and where it may go.
- Cutlass extends the same language approach to systems programming, with errors handled explicitly and thread, stack and memory budgets declared at compile time.
